STRONG THIRD QUARTER RESULTS AND STORING WATER FOR THE WINTER

- Strong revenues driven by high energy prices and solid results from market activities
- Steady operations and solid financial position
- The European energy crisis is continuing and market conditions are expected to remain volatile

The European energy crisis continued through the third quarter following Russia's invasion of Ukraine earlier in the year. The unprecedented high power prices on all energy-related commodities remain a burden for both industries and consumers in Europe.

Statkraft delivered strong results in the third quarter supported by high energy prices and solid contribution from trading and origination activities. Hydropower generation was lower as Statkraft reduced the generation during the dry summer to ensure sufficient hydro reservoir levels for the winter. Statkraft is well positioned amid the ongoing energy crisis in Europe.

The quarterly generation was 12.2 TWh, 3.1 TWh lower than the third quarter last year. Despite the lower hydropower generation, particularly in Southern Norway, strong results from the Market operations segment and high power prices led to an almost doubling of the underlying EBIT in the quarter to NOK 9 billion compared with the same quarter last year.

Record-high European gas prices in combination with very dry weather in Southern Norway and reduced availability of nuclear power capacity in Europe has led to high power prices. The average Nordic system price reached a new record level with 176 EUR/MWh in the quarter and the prices continue to differ significantly between the price areas, with particularly high prices in Southern Norway.

The underlying EBIT included positive net unrealised effects of NOK 2.2 billion, mainly related to trading and origination. Hedging of Nordic assets led to negative unrealised results as the forward power prices increased in the quarter and were at a higher level than the contracted fixed prices.

Despite a strong increase in the underlying EBIT, the net profit of NOK 3.8 billion was NOK 1.1 billion lower than in the same quarter last year. The main explanations for this were

related to last year's large positive effects from reversal of impairments in addition to lower contribution from Agder Energi due to negative hedging effects this quarter.

Cash flow from operating activities were NOK 8.6 billion in the quarter. Statkraft has a very solid financial position and has secured the necessary financial and liquidity reserves to support our market positions.

The underlying EBIT year to date was NOK 30.7 billion and the net profit NOK 14 billion. This was record-high for any first nine months period.

Statkraft continues to offer long-term power contracts to maintain the position as a competitive supplier to the energy intensive industry in Norway. In the quarter, Statkraft signed such an agreement with the ferrosilicon company Finnjord, extending the existing agreement from 2031 to 2044. In November, a new power sales agreement was signed with the producer of publication paper Norske Skog. The new agreement will ensure delivery of 2.9 TWh over the contracted period from 2024 until 2030.

A key element in Statkraft's strategy is to upgrade and expand the Norwegian hydropower assets. In the third quarter an investment decision was made for new rock-filled dams at Kjela. The project has low impact in terms of environment and encroachment on nature.

In September, the general assemblies of Agder Energi and Glitre Energi approved the merger of the two companies, which is expected to be finalised in the fourth quarter of 2022. The merger is subject to approval from the Ministry of Petroleum and Energy. Statkraft's ownership in the new company, named Å energi, will be 33.3 per cent.

The Norwegian government has proposed changes to the taxation of power producers increasing taxes going forward. The proposed changes will, if enacted, have a negative impact on Statkraft's investment capacity and project profitability.

Strategic targets

The Board of Directors has set financial and non-financial targets for the Group. The performance related to several of the targets will be assessed over a longer time horizon. The main targets and the status at the end of the quarter are listed in the table below.

AMBITION	TARGET	STATUS
HSE and sustainability		
Prevent incidents and be committed to a workplace without injury or harm	Zero serious injuries	11 ¹⁾
Prevent corruption and unethical practices in all activities	Zero serious compliance incidents	0
Deliver climate-friendly, renewable power and taking responsible environmental measures	Zero serious environmental incidents	0
Financial performance		
Solid return on capital (ROACE) over time	12%	32%
Value creation in ongoing business		
Efficient management of energy resources in the Nordic hydropower fleet	>3.5% higher realised prices than the average spot price in the market	3.7%
Growth		
Grow capacity in renewable energy (hydro-, wind- and solar power)	9 GW growth by 2025	3.4 GW
Organisational enablers		
Improve diversity in background, competence and gender across the company	At least 35% women in top management positions by 2025 and at least 40% by 2030	31%

1) Updated from previously reported 9 in the second quarter, no incidents in the third quarter.

In the first nine months of 2022, there were two fatal accidents in addition to nine serious injuries. Strengthening the safety culture and performance – across the organisation and among subcontractors – is the top priority and has high attention throughout the organisation. Caring for people is at the core of Statkraft's activities and Statkraft works continuously towards the goal of zero injuries.

Statkraft has zero tolerance for corruption and unethical practices in all activities, and there were no serious compliance incidents in the first nine months of 2022. Assessing environmental risks is part of Statkraft's daily risk management procedures and practices, and there were no serious environmental incidents in the first nine months of 2022.

Statkraft aims to deliver a solid return on capital employed. Measured on 12 months rolling basis, the ROACE was 32 per cent. The reportable segments in the Group have different risk and business models and are at different stages of development. Therefore, some of the segments are expected to achieve a ROACE higher than 12 per cent and some will deliver below.

With Europe's largest portfolio of flexible hydropower plants and reservoir capacity, Statkraft can optimise Nordic hydropower generation over several years. Statkraft is therefore well positioned to achieve a higher average spot price for this generation than the average Nordic spot price. As of September 2022, Statkraft's realised prices (measured over the last 60 months) were 3.7 per cent higher than the average spot price in the Nordics.

The strategy has a growth target of 9 GW by 2025. At the end of the third quarter, the status for this target is 3.4 GW. By 2025, the aim is to be a major wind and solar developer with a development rate of 2.5–3 GW per year, and from 2030 an annual development rate of 4 GW per year.

Statkraft aims for a diverse workforce and has a long-term ambition of having at least 40 per cent women in top management positions. At the end of September 2022, the total share of women in all top management positions was 31 per cent, up from 30 per cent at the end of 2021.

Corporate responsibility and HSE

	Third quarter		Year to date		Year
	2022	2021	2022	2021	2021
Corporate responsibility and HSE					
Fatal accidents ¹⁾	0	0	2	0	0
Serious environmental incidents	0	0	0	0	0
Absence due to illness, Group	2.8%	2.5%	3.1%	2.3%	2.4%
TRl rate ¹⁾²⁾			3.9	3.8	3.6
Full-time equivalents, Group			4 626	4 306	4 385

¹⁾ Includes employees and suppliers in plants where Statkraft owns 20% or more.

²⁾ TRl rate (rolling 12 months): Number of injuries per million hours worked.

There were no serious injuries reported in the quarter.

Market and production

Power prices and optimisation of power generation constitute the fundamental basis for Statkraft's revenues. The majority of Statkraft's output is generated in the Nordic region. Power prices are influenced by hydrological factors, commodity prices for thermal power generation, technology cost, grid restrictions and nuclear availability.

POWER PRICES

Electricity, average monthly system price
EUR/MWh

Sources: Nord Pool and the European Energy Exchange (EEX).

	Third quarter			Year to date			Year
	2022	2021	Change	2022	2021	Change	2021
Market prices (average)							
System price, Nord Pool (EUR/MWh)	176.4	68.5	107.9	135.7	50.9	84.8	62.2
Spot price (base), EEX (EUR/MWh)	372.5	97.5	275.1	247.5	69.1	178.4	96.6
Spot price (peak), EEX (EUR/MWh)	405.0	107.3	297.7	272.4	77.3	195.1	114.5
Spot price (base), N2EX UK (GBP/MWh)	294.6	129.8	164.8	215.6	88.9	126.6	117.4

The price of energy and energy-related commodities remained at a very high level in the quarter, although the prices were reduced somewhat towards the end of the quarter.

The average system price in the Nordic region was 176.4 EUR/MWh in the quarter, an increase of 107.9 EUR/MWh. The increase was mainly due to higher thermal prices and lower reservoir levels, especially in the South of Norway. There were significant price area differences in the quarter, with average Norwegian prices in the south in the range 289-352 EUR/MWh and prices in the mid- and north around 32 EUR/MWh and 14 EUR/MWh respectively.

The average base price in the German market (EEX) was 372.5 EUR/MWh in the quarter, an increase of 275.1 EUR/MWh. The increase was mainly due to significantly higher gas, coal and CO₂ prices. The average base price in the UK was 294.6 GBP/MWh in the quarter, an increase of 164.8 GBP/MWh. The increase was mainly driven by substantially higher gas prices.

CONSUMPTION AND RESOURCE ACCESS IN THE NORDIC REGION

TWh	Third quarter		Year to date		Year
	2022	2021	2022	2021	2021
Consumption and output					
Nordic					
Nordic consumption	79.5	82.1	277.1	288.5	397.7
Nordic output	88.0	86.9	301.1	303.6	420.2
Net Nordic import(+)/export(-)	-8.5	-4.8	-24.0	-15.1	-22.5
Norway					
Norwegian consumption	26.9	27.5	95.7	100.6	138.3
Norwegian output	29.0	32.6	104.5	113.8	156.5
Net Norwegian import(+)/export(-)	-2.1	-5.1	-8.8	-13.2	-18.1

The total reservoir level for all hydropower producers in the Nordic region was 84 per cent of median level at the end of the quarter, corresponding to 70.9 per cent of total capacity. There were significant differences in the reservoir levels in Norway, with the levels in the south of Norway well below median. Price area NO2 was 64 per cent of median at the end of the quarter and showed a positive development from mid-September.

STATKRAFT'S POWER GENERATION

Statkraft's generation optimisation is determined by price expectations, water reservoir capacity and reservoir water levels, access to resources (inflow and wind), the margin between power prices and gas in addition to CO₂ prices (spark spread) and grid restrictions. For the flexible hydropower assets, Statkraft's water values (value of future hydropower generation) are compared with the power prices, and power will be generated when the power prices are higher than the water values.

TWh	Third quarter		Year to date		Year
	2022	2021	2022	2021	2021
Generation, technology					
Hydropower	10.7	13.9	40.3	46.2	63.0
Wind power	0.8	0.8	3.2	2.7	3.9
Gas-fired power	0.6	0.5	1.2	2.3	2.7
Biomass and solar power	0.1	0.1	0.2	0.2	0.2
Total generation	12.2	15.3	44.9	51.3	69.9

TWh	Third quarter		Year to date		Year
	2022	2021	2022	2021	2021
Generation, geography					
Norway	8.9	12.1	34.1	39.9	54.5
Sweden	1.4	1.6	4.9	5.1	7.1
Europe ex. Nordic	0.9	0.8	2.6	3.5	4.3
Rest of the world	1.0	0.8	3.3	2.9	4.0
Total generation	12.2	15.3	44.9	51.3	69.9

The combination of gas prices remaining at a high level following low supply from Russia as a result of the war in Ukraine, very dry weather in Southern Norway and reduced availability of nuclear power capacity in Europe has increased power prices and Statkraft's water values. This led to a low hydropower generation in the quarter, that increased the reservoir levels for the coming winter. Total power generation was 12.2 TWh, which was 3.1 TWh lower than the same period last year. The decrease was primarily related to Norwegian hydropower generation, which was 27 per cent lower than in the third quarter of 2021. The reduction was particularly related to Southern Norway.

The district heating deliveries amounted to 0.1 TWh and were stable compared with the same quarter last year.

TWh	Third quarter		Year to date		Year
	2022	2021	2022	2021	2021
Generation, type					
Net physical spot sales	8.2	11.6	32.0	39.1	53.0
Concessionary sales	0.6	0.5	2.5	2.4	3.5
Long-term contracts	3.1	3.0	9.6	9.2	12.5
Other statutory bilateral contracts	0.2	0.2	0.7	0.7	0.9
Total generation	12.2	15.3	44.9	51.3	69.9

Spot sales from net physical deliveries were significantly reduced in the quarter, driven by lower Norwegian hydropower generation. Statkraft is a reliable supplier of renewable energy to the power-intensive industry in Norway and generation to long-term contracts were stable in the quarter.

FINANCIAL RISK REDUCING ACTIVITIES

With the purpose to reduce risk from power generated from its own power plants Statkraft has entered into various physical and financial contracts. With less than one third of the estimated generation for the next years hedged, Statkraft has a relatively low level of hedging.

In order to secure stable revenues, certain volumes are sold on contracts at fixed volume and price with a duration varying from 3-15 years. For these contracts, the main rule is that only revenue from the contracted volume delivered in the reporting period is recognised under the line item "Revenues" in the financial statements. Thus, fluctuations in the forward power prices do not have any accounting effects on such contracts as the value of future deliveries of the contracts is not recognised in the financial statements.

Other contracts are recognised at fair value. Thus, the difference between the contracted fixed price and the forward market price of the volume for the remaining contract period is recognised in the financial statements under the line item "Gains/losses from market activities" at each reporting period. Hedging contracts that are recognised at fair value will in periods with volatile power prices lead to significant effects in the financial statements as changes in the forward market prices will lead to changes in the value of the contracts that is recognised at each reporting period.

The main hedging positions and the corresponding accounting treatment are described more in detail below.

Bilateral physical power sales agreements:

Statkraft has entered into bilateral physical power sales agreements with industrial customers and other customers. Approximately half of the contracted volume until 2030 is related to industry customers in Norway, reported under the segment European flexible generation. There are also bilateral physical power sales contracts in other countries in Europe and South America, reported under the segment International power. The power delivered to these customers are generated at Statkraft's power plants in Europe and South America. These long-term physical power sales agreements are entered into at fixed prices and ensure stable revenue for Statkraft, and correspondingly predictable costs for the customers. For the most significant part of the contracts, revenues are recognised as produced and delivered to the customers. The total contracted volume of bilateral physical power sales agreements are approximately 106 TWh from 2023 until 2030, of which 54 TWh is with industry customers in Norway.

Some of the bilateral physical power sales contracts in Norway have prices linked to certain commodity prices. Changes in such forward commodity prices are recognised at fair value at the end of each reporting period. These derivatives are recognised at fair value and changes in the forward market prices will lead to changes in the value of the derivatives that is recognised at each reporting period.

Financial risk reduction contracts:

Statkraft has also entered into financial contracts in order to secure a defined level of revenues from future power generation. The segments European flexible generation, International power and European wind and solar have entered into financial sales contracts at fixed prices to stabilise future revenue from power generation. The financial contracts are recognised at fair value meaning that fluctuation in the forward power prices will lead to changes in the value of the contracts that must be recognised at each reporting period in the financial statements. The contracted volume of financial risk reducing contracts are in total approximately 13 TWh from 2023 until 2030.

Dynamic asset management portfolios:

Statkraft has one Nordic and one Continental dynamic asset management portfolio (DAMP) reported under the segment Market operations. The objective of the dynamic hedging portfolios is to reduce risk and optimise revenues for power generating assets in the Nordics and in Germany. The financial contracts are recognised at fair value.

Financial performance

FINANCIAL PERFORMANCE THIRD QUARTER

The increase in underlying EBIT compared with the third quarter last year was primarily related to the Market operations segment with strong results from trading and origination. In addition, the results from dynamic asset management portfolios improved from last year, however still with a loss. Despite a significantly lower hydropower generation, particularly in the southern parts of Norway where the power prices are highest, the European flexible generation segment delivered an EBIT on par with the same quarter in 2021. This was due to higher results from Baltic Cable and improved contribution from the gas-fired power plants in Germany due to high peak spark spreads.

The positive unrealised effects included in the underlying EBIT in the quarter was mainly related to trading and origination, see note 6.

Underlying operating expenses increased 22 per cent compared with the third quarter last year, primarily related to increased operating expenses for the 43 German and French wind farms that was acquired in the fourth quarter last year, an overall increased activity level in line with the growth strategy and higher performance related remuneration.

The EBIT IFRS was negatively affected by unrealised value changes from embedded EUR derivatives driven by a stronger forward NOK against EUR and an impairment for a hydropower project in Chile. In the comparable period there were significant positive effects from reversal of impairments for Nordic wind farms and German gas-fired power plants.

The decrease in share of profit/loss in equity accounted investments was primarily related to lower contribution from Agder Energi due to losses from financial risk reducing contracts and that there was a positive effect from reversal of impairments in India in the third quarter last year.

Net financial items and tax expense are commented in separate sections.

FINANCIAL PERFORMANCE YEAR TO DATE

The increase in underlying EBIT compared with the first nine months of 2021 was primarily related to the very high Nordic power prices. This led to improved results from the segments European flexible generation and Industrial ownership. Furthermore, the results from the Market operations segment significantly improved, particularly related to trading and origination activities.

Underlying operating expenses increased 24 per cent compared with the first nine months of last year, mainly related to the same factors as for the third quarter, as well as public pension scheme changes in Norway.

The decrease in share of profit/loss in equity accounted investments was primarily related to losses from financial risk reducing contracts in Agder Energi and Eviny.

Net financial items and tax expense are commented in separate sections.

Statkraft's total assets have increased significantly since the corresponding quarter in 2021 and the carrying value is approximately NOK 475 billion at quarter end. The significant increase in total assets is mainly explained by a surge in the price of energy and energy-related commodities, leading to a substantial increase in the value of the Group's derivatives.

NET OPERATING REVENUES AND OTHER INCOME UNDERLYING

NOK million	Third quarter			Year to date			Year 2021
	2022	2021	Change	2022	2021	Change

Net operating revenues and other income	13 232	8 111	5 121	43 675	27 935	15 740	41 749

Net operating revenues and other income underlying
NOK million

In the graph above Generation, District heating, Customers and Other are shown as sales revenues less energy purchase.

- Net operating revenues from Generation increased, mainly driven by significantly higher Nordic power prices, partly offset by lower Norwegian hydropower generation driven by higher water values in Southern Norway.
- Net operating revenues from Customers increased, mainly driven by improved margins from market access activities in Germany.
- Net operating revenues from Other increased, mainly driven by improved contribution from the subsea interconnector between Sweden and Germany (Baltic Cable).
- Gains/losses from market activities increased, see separate section below for further information.
- Other operating income has decreased, mainly driven by recognition of a settlement for extended concessions in Brazil in the comparable period.
- Transmission costs have decreased, mainly driven by negative variable fee in the NO2 (Southern Norway) price area.

¹⁾ Includes trading, origination and market access.

- European flexible generation ended with a loss of NOK 1606 million in the quarter, mainly due to hedging of Nordic generation revenues driven by increased forward power prices. This was partly offset by a positive effect from hedging of gas-fired power plants in Germany, which was driven by a decrease of future spark spreads. The EBIT from embedded derivatives was positive in the quarter following increased forward prices on certain commodities.
- Market operations contributed with NOK 1241 million in the quarter, mainly due to gains from activities within trading & origination, partly offset by losses from hedging of revenues from Nordic and Continental power generating assets from the dynamic asset management portfolios.
- International power had a loss from hedging of revenues from generation in Albania of NOK 683 million in the quarter following an increase in the forward power prices through the third quarter.
- European wind and solar delivered a loss of NOK 182 million in the quarter due to financial hedging of revenues from generation related to wind farms in Germany and France. This was mainly driven by increased forward power prices in both Germany and France in the quarter.

OPERATING EXPENSES UNDERLYING

NOK million	Third quarter			Year to date			Year 2021
	2022	2021	Change	2022	2021	Change	
Operating expenses							
Salaries and payroll costs	-1 602	-1 252	- 351	-4 995	-3 751	-1 244	-5 286
Depreciations and amortisations	-1 135	- 984	- 151	-3 383	-2 929	- 454	-4 113
Regulatory fees	- 319	- 336	17	-1 021	-1 011	- 10	-1 375
Other operating expenses	-1 217	- 929	- 288	-3 546	-2 786	- 760	-4 183
Operating expenses	-4 273	-3 501	- 772	-12 945	-10 477	-2 468	-14 957

- The increase in salaries and payroll costs was mainly due to higher number of full-time equivalents following the increased activity level in line with the growth strategy and higher performance-related remuneration.
- The increase in depreciations and amortisations was mainly related to newly acquired companies within German and French wind power and higher carrying value following previous reversal of impairments within Nordic wind power and German gas-fired power. In addition, there was an increased asset base in Chile and Brazil.
- Other operating expenses was higher mainly due to increased business development costs in the segments European wind and solar and International power related to the growth strategy and costs from newly acquired companies within German and French wind power.

ITEMS EXCLUDED FROM OPERATING PROFIT/LOSS (EBIT) UNDERLYING

The segment reporting is based on underlying figures, which is in accordance with how the corporate management makes, follows up and evaluates its decisions. Unrealised value changes from embedded EUR derivatives, gains/losses from divestments of business activities which is not included in the DS/DBS business model and impairments/reversal of impairments are excluded from operating profit/loss (EBIT) underlying. See the section Segments in the quarterly financial statements as well as the Alternative Performance Measures section for further information.

NOK million	Third quarter			Year to date			Year 2021
	2022	2021	Change	2022	2021	Change	
Items excluded from operating profit/loss (EBIT) underlying							
Unrealised value changes from embedded EUR derivatives	- 329	54	- 383	- 484	- 777	293	-1 285
Gains/losses from divestments of business activities	-	713	- 713	- 0	798	- 798	817
Impairments/reversal of impairments	- 288	3 092	-3 379	- 253	3 137	-3 390	3 403
Items excluded from operating profit/loss (EBIT) underlying	- 617	3 859	-4 476	- 737	3 158	-3 895	2 934

- Embedded EUR derivatives linked to long-term industry contracts had a negative effect. This was mainly driven by a strengthening of the forward NOK against EUR.
- Impairments/reversal of impairments in the quarter was mainly related to a hydropower project in Chile, see note 8.

NET FINANCIAL ITEMS

NOK million	Third quarter			Year to date			Year 2021
	2022	2021	Change	2022	2021	Change	
Net financial items							
Net currency effects	- 150	- 154	4	- 607	662	-1 268	1 089
Interest and other financial items	172	- 120	291	776	- 46	823	242
Net financial items	21	- 274	295	170	616	- 446	1 331

Net financial items third quarter

- Net currency losses in the quarter were driven by a weakening of NOK against EUR and were primarily related to external debt, partly offset by bank deposits in EUR.
- Interest and other financial items improved mainly due to positive value changes on interest rate derivatives and higher interest income from increased liquidity, partly offset by increased interest expenses due to new debt and increasing interest rates.

Net financial items year to date

- Net currency losses year to date of NOK 607 million were primarily related to external debt, partly offset by bank deposits and receivables related to margin calls.
- The improvement in interest and other financial items were mainly driven by the same factors as for the quarter.

TAX EXPENSE

NOK million	Third quarter			Year to date			Year 2021
	2022	2021	Change	2022	2021	Change	
Tax expense							
Profit/loss before tax	8 204	9 057	- 853	30 160	22 464	7 696	32 744
Nominal tax rate in Norway	22%	22%	0%	22%	22%	0%	22%
Tax calculated at nominal Norwegian tax rate	1 805	1 993	- 188	6 635	4 942	1 693	7 204
Tax on share of profit/loss in equity accounted investments	35	- 190	225	0	- 271	272	- 371
Resource rent tax payable	2 681	1 978	704	8 918	4 405	4 513	7 749
Resource rent tax deferred	118	792	- 674	1 105	1 338	- 232	2 324
Other differences from the nominal Norwegian tax rate	- 260	- 472	212	- 548	- 147	- 400	- 244
Tax expense	4 380	4 101	279	16 111	10 266	5 845	16 663
Effective tax rate	53.4%	45.3%	8.1%	53.4%	45.7%	7.7%	50.9%

Tax expense third quarter

- Resource rent tax payable increased, mainly due to significantly higher Norwegian power prices. This was partly offset by lower generation.
- Resource rent tax deferred decreased, mainly due to unrealised value changes related to embedded derivatives.
- Other differences from the nominal Norwegian tax rate were mainly due to changes in unrecognised deferred tax assets.

Tax expense year to date

- Resource rent tax payable increased, mainly due to the same factors as for the third quarter.
- Resource rent tax deferred decreased, mainly due to changes in utilisation of resource rent tax carryforwards.
- Other differences from the nominal Norwegian tax rate were mainly driven by the same factor as for the third quarter.

Proposed changes in regulations in Norway

- On 28 September the Norwegian Government proposed significant changes in regulations affecting both hydropower producers and wind power producers. The proposals will, if enacted, have material effects on Statkraft's financial statements. See note 12 for further details.

RETURN ON AVERAGE CAPITAL EMPLOYED (ROACE)

The increase in ROACE compared with the last quarter was mainly due to a higher operating profit/loss (EBIT) underlying (rolling 12 months). Average capital employed was stable compared with the last quarter.

CASH FLOW

NOK million	Third quarter			Year to date			Year 2021
	2022	2021	Change	2022	2021	Change	
Cash flow							
Operating activities	8 573	9 887	-1 314	27 710	19 800	7 910	26 242
Investing activities	-1 544	- 483	-1 061	-4 891	-2 207	-2 684	-5 618
Financing activities	-5 468	-1 387	-4 081	-6 335	-3 083	-3 252	5 418
Net change in cash and cash equivalents	1 560	8 017	-6 456	16 484	14 510	1 974	26 042
Cash and cash equivalents (incl. restricted cash) at period end				55 721	25 674	30 047	37 162

Cash flow in the quarter

- The EBIT (IFRS) of NOK 8342 million includes NOK 1896 million of unrealised positive non-cash effects. Working capital movements in the quarter were NOK 769 million. Further, net cash inflow from margin calls of NOK 1986 million also contributed positively, partly offset by cash outflow related to investments in DS/DBS projects of NOK 1350 million, leading to a cash flow from operations of NOK 8573 million.
- The negative cash flow from investing activities of NOK 1544 million was mainly related to construction projects within wind power in Brazil and Chile of NOK 678 million and maintenance investments in Norwegian hydropower of NOK 346 million.
- The cash flow from financing activities was negative with NOK 5468 million and consisted mainly of cash outflow from dividend payment of NOK 10 214 million, somewhat offset by cash inflow from green bond issue of NOK 4965 million.

Cash flow year to date

- The EBIT (IFRS) of NOK 29 993 million was partly offset by negative working capital changes of NOK 2526 million and taxes paid of NOK 2507 million, leading to a cash flow from operations of NOK 27 710 million.
- The negative cash flow from investing activities was mainly driven by the same factors as for the quarter, with investments of NOK 5509 million, partly offset by net cash inflows from divestments of assets within the DS/DBS business model of NOK 1018 million.
- The cash flow from financing activities includes mainly repayment of debt of NOK 21 410 million and payment of dividend of NOK 10 214 million, offset by cash inflows from new debt of NOK 25 463 million.

INVESTMENTS

New capacity: Construction of new power or heating plants, or investments that increase the capacity (MW) of existing plants. These projects are referred to as build-own-operate (BOO) further in the report.

Maintenance: Investments in existing power or heating plants that do not increase the capacity (MW).

Other: Other investments in property, plant and equipment (PPE) or intangible assets. These include assets such as grid assets, heating pipes, biofuel assets, vehicle charging infrastructure and office equipment.

New capacity for subsequent divestment (DS/DBS): Development and construction investments related to projects that Statkraft intends to divest either before, at the time of, or shortly after completion. The projects are presented as inventories and are reported under the segment European wind and solar. These projects are referred to as develop-sell (DS) and develop-build-sell (DBS) further in the report.

Shareholdings, consolidated: Acquisition of shareholdings that are fully or proportionally consolidated.

Shareholdings, equity accounted: Investments in shareholdings that are accounted for in accordance with the equity method.

Shareholdings, financial non-current: Investments in shareholdings that are recognised as financial assets at fair value.

INVESTMENTS THIRD QUARTER

Investments in new capacity were mainly related to construction of wind farms in Chile and Brazil and hydropower plants in India and Chile. The quarterly maintenance investments were primarily related to Nordic hydropower. Investments classified as “Other” were mainly related to grid in Norway and EV charging activities in the Nordics, whereas wind and solar projects in Ireland constituted the main quarterly investments in DS/DBS.

Other technologies	Lister Drive Greener Grid Park ⁵⁾	BOO	UK	-	100%	2022	Q4

¹⁾ Projects with an estimated CAPEX of at least NOK 500 million.

²⁾ In accordance with the strategy: BOO (Build, Own, Operate), DBS (Develop, Build, Sell). n/a refers to rehabilitation projects.

³⁾ Total for project, incl. partners' share. For solar power projects, the new capacity is based on MWp.

⁴⁾ The project has been divested. Statkraft is conducting the construction, engineering and procurement (EPC) of the Cadiz projects. See note 16.

⁵⁾ Grid network rotating stabilisers.

Segments

The Group's operating segments are in accordance with how the corporate management makes, follows up and evaluates its decisions. The operating segments have been identified on the basis of internal management information that is periodically reviewed by the corporate management and used as a basis for resource allocation and key performance review.

All the segments, except Market operations, have a business model that entails ownership and operation of its assets. This business model is known as Build-Own-Operate (BOO).

Following Statkraft's updated strategy and corresponding changes to business areas and corporate management, an assessment of the operating and reportable segments is concluded. Statkraft will report on the new reportable segments from the fourth quarter 2022 when all organisational changes are completed. The new segments from the fourth quarter are:

- Nordics
- Europe
- International
- Markets
- District heating
- New technologies

The current reportable segments are defined as:

European flexible generation includes asset ownership and operation of most of the Group's hydropower business in Norway, Sweden, Germany and the United Kingdom, as well as the gas-fired and the biomass power plants in Germany and the subsea interconnector between Sweden and Germany (Baltic Cable).

Market operations includes trading, origination, market access for smaller generators of renewable energy, as well as dynamic asset management portfolios revenue optimisation and risk mitigation activities related to Continental and Nordic power generation. The segment has activities in several countries in Europe, and is also active in Brazil, India and USA.

Trading activities involve buying and selling standardised and liquid products, such as power, gas, oil, CO₂ products and energy-related metals. The activities also include trading of transportation capacity across borders.

Origination activities include buying and selling both standard and structured products. Structured products are typically environmental certificates or power contracts with tailor made profiles entered into in different currencies. Further, Statkraft enters into long-term power purchase and power sales agreements with the aim to be a market integrator for renewable energy producers and long-term renewable energy supply to corporate consumers.

Market access activities provide market access to external generators of renewable energy with the aim to optimise revenues for intermittent and flexible assets and selling the power to the market.

Dynamic asset management portfolios (DAMP) are hedging portfolios with the objective to reduce risk and optimise revenues for the Nordic and Continental asset generation. The portfolios consist of financial contracts mainly for power, CO₂, coal, and gas products. In general, the time horizon for these contracts is less than five years.

International power includes development, ownership and operation of renewable assets in emerging markets. The segment operates in Albania, Brazil, Chile, India, Nepal, Peru and Turkey.

European wind and solar has two main business models. One of the models is to develop and construct onshore wind and solar power plants with the intention to divest the power plants either before, at the time of, or shortly after completion. This business model is known as Develop-Sell (DS) or Develop-Build-Sell (DBS). The segment has development and construction activities in several countries in Europe. The segment also has a BOO business model for wind farms in Norway, Sweden, Ireland, Germany and France, as well as grid service assets in the UK and Ireland.

District heating includes development, ownership and operation of district heating plants in Norway and Sweden.

Industrial ownership includes management and development of Norwegian shareholdings within the Group's core business and includes the shareholdings in Skagerak Energi, Eviny and Agder Energi. Skagerak Energi is included in the consolidated financial statements, while Eviny and Agder Energi are reported as equity accounted investments.

In addition:

Other activities includes costs related to governance of the Group, new businesses within biomass, electric vehicle charging and hydrogen, as well as venture capital investments. Unallocated assets are also reported as Other activities.

Group items includes eliminations.

Generation (TWh)	10.0	12.5	35.4	40.6	55.0

Key events

- The long-term power sales agreement with Finnjord was extended from 2031 to 2044. The yearly volume of the contract is still approx. 650 GWh.
- On 28 September the Norwegian Government proposed significant changes in regulations affecting both hydropower producers and wind power producers. See note 12 for further details.

Quarterly financial performance

- The high power prices were lifted even further in the third quarter and were significantly higher compared with the same quarter last year contributing to an increase in revenues from spot generation.
- The increase in power prices was more than offset by lower generation and negative effects from financial hedging of generation revenues of NOK 1.9 billion following the significant increase in future power prices in the quarter. The generation in South Norway (NO2) has been very low in the quarter driven by the low reservoir levels.
- The subsea interconnector between Sweden and Germany (Baltic Cable) contributed positively, driven by a strong increase in the price spread between Germany and SE4 (South Sweden). A further reduction of NOK 693 million in the sales revenues has been recognised in the third quarter, see note 13.

Year to date financial performance

- The increase in underlying EBIT was mainly driven high power prices and high price spreads, partly offset by lower Norwegian hydropower generation and negative effects from financial hedging.

Financial metrics

- ROACE remained high at 54.3 per cent following the strong underlying EBIT in the quarter.

Quarterly investments

- The investments were mainly related to maintenance within Nordic hydropower.

¹⁾ Includes trading, origination and market access.

Key events

- A 10-year power supply agreement has been signed with German Telekom subsidiary Power & Air Solutions, with an estimated total volume of 920 GWh.

Quarterly financial performance

- The increase in underlying EBIT was driven by record-high prices for power and other power-related commodities and high volatility in the forward markets. These price movements led to a positive result from trading & origination in the quarter which was partly offset by a negative result from dynamic asset management portfolios.
- Trading & origination had a positive EBIT of NOK 2311 million in the quarter compared with a negative EBIT of NOK 1532 million in the third quarter of 2021.
- Dynamic asset management portfolios ended with a negative EBIT of NOK 969 million in the quarter, mainly due to an increase in the forward power prices. Comparable figure for the third quarter was NOK -2465 million. The dynamic asset management portfolios in addition to optimise revenues, are risk-reducing portfolios for Statkraft's flexible assets in Europe.
- The operating expenses increased, primarily related to higher performance related remuneration, increased number of full-time equivalents and higher IT expenses.

Year to date financial performance

- The increase in underlying EBIT was driven by higher contribution from both trading & origination and dynamic asset management portfolios.
- The operating expenses increased, primarily related to increased number of full-time equivalents, higher performance related remuneration and higher IT expenses.

Key events

- Continued progress on solar projects in India and closed an acquisition of land to be utilized in a planned 76 MWP solar park.
- An impairment of NOK 277 million related to a hydropower project in Chile was recognised in the quarter. See note 8 for further information.

Quarterly financial performance

- The underlying EBIT decreased mainly due to positive one-off effect from concession extensions in Brazil in the comparable period. This was partly offset by increased contributions from Brazil, Chile and Peru due to higher generation and higher power prices.
- Share of profit from equity accounted investments decreased mainly due to reversal of impairments in India in the comparable period. See note 8.

Year to date financial performance

- The underlying EBIT increased with positive contributions from Peru, Turkey and Chile, mainly due to higher power prices.
- The increase in share of profit from equity accounted investments was mainly driven by higher power prices and generation in India and Chile.

Financial metrics

- ROACE was 0.5 per cent, slightly up from previous quarter, driven by a higher underlying EBIT.
- ROAE was 21.6 per cent, a significant decrease from previous quarter, which is explained mainly by large impairment reversals in India in the comparable period.

Quarterly investments

- The investments were mainly related to the construction of the wind farms Torsa in Chile and Ventos de Santa Eugenia in Brazil, as well as the hydropower plants Los Lagos in Chile and Tidong in India.

EUROPEAN WIND AND SOLAR

^{*)} Included in Interest and other financial items.

Key events

- Commercial operation for rotating stabiliser with a capacity of 26 MW at Keith Greener Grid Park in Scotland.

Quarterly financial performance

- The decrease in underlying EBIT was mainly driven by the divestment of solar projects in Spain in the third quarter of 2021. Further, lower price levels and generation in mid Norway (NO3) and Sweden (SE2), as well as losses from financial hedging of generation revenues from wind farms in Germany and France, had a negative effect this quarter. This was partly offset by higher revenues from spot generation from German and French wind farms.

Year to date financial performance

- Decrease in the underlying EBIT year to date was mainly driven by significant losses from financial hedging. The losses were mainly unrealised and were related to German and French wind farms. This was partly offset by higher revenues from spot generation from the same wind farms.
- The operating expenses have increased following increased business development activities.

Financial metrics

- ROACE was -9.8 per cent, down from previous quarter primarily driven by a lower underlying EBIT.
- ROAE was 32.2 per cent, a significant increase from previous quarters, following higher power prices and generation in the UK.

Quarterly investments

- Investments were mainly related to development and construction of wind and solar projects within the DS/DBS business model, primarily in Ireland.

Delivered volume (GWh)	103	94	660	712	1 065

^{*)} Included in Interest and other financial items.

Quarterly financial performance

- The underlying EBIT improved compared with the third quarter in 2021, primarily due to higher delivered volume.
- The Norwegian heating prices were positively affected by high power prices in the southern parts of Norway. In Sweden the prices were lower as Statkraft has a new price model leading to lower prices in the summer months when the consumption is low and higher prices during the winter season when the consumption is high.

Year to date financial performance

- Underlying EBIT decreased due to lower delivered volume and higher operating expenses, primarily related to changes in the Norwegian public pension scheme.
- Delivered heating volume was lower due to relatively mild winter months, while the heating prices were on par with the first nine months of 2021.

Financial metrics

- ROACE (12 months rolling) was slightly up from 5.1 per cent in the second quarter due to improved underlying EBIT. The average capital employed was stable.

Quarterly investments

- The investments were primarily related to pipelines as well as maintenance and other reinvestments in existing assets, mainly in Norway.

INDUSTRIAL OWNERSHIP

Total investments	343	224	818	789	1 096
Generation (TWh)	0.4	1.1	2.6	4.8	6.5

Key events

- On 20 September, Agder Energi and Glitre Energi held extraordinary general meetings where the merger between the two companies was ratified. The Norwegian Competition Authority has finalised their treatment of the case without any objections. Subject to approvals from the remaining regulatory authorities, the merger is expected to be completed during fourth quarter 2022.

Quarterly financial performance

- Underlying EBIT decreased, mainly due to increased transmission costs and operating expenses, partly offset by higher generation revenues.
- Share of profit/loss from equity accounted investments decreased significantly, explained mainly by losses in Agder Energi due to negative value changes from energy contracts, driven by higher future power prices.

Year to date financial performance

- The underlying EBIT increased mainly due to significantly higher power prices in the NO2 area in Norway, partly offset by lower generation.
- The decrease in share of profit/loss from equity accounted investments was mainly driven by the same factors as for the third quarter.

Financial metrics

- ROACE was 32.8 per cent, a slight decrease from the previous quarter, driven by a lower underlying EBIT.
- ROAE was -4.7 per cent, a decrease from the previous quarter, mainly due to a lower share of profit from Agder Energi and Eviny.

Quarterly investments

- The investments were primarily related to grid activities.

Quarterly financial performance

- The decrease in underlying EBIT was primarily due to higher project and business development costs within EV charging and business development costs within hydrogen.

Year to date financial performance

- The decrease in underlying EBIT was primarily due to the same factors as for the third quarter.

Quarterly investments

- The investments were primarily related to purchase of EV charging equipment in MER.

Outlook

The power prices have continued at very high levels and are also very volatile. There is still an extraordinary situation in the energy markets and the high prices are expected to continue in the short and medium term. To prepare for the coming winter, Statkraft is increasing the reservoir filling.

The need for flexibility in the energy market is accelerating. Statkraft has Europe's largest portfolio of flexible hydropower plants and reservoir capacity, and these assets are an important source of dispatchable power generation. The operations of the assets are continuously optimised according to the hydrological situation and expected power prices. To further strengthen this competitiveness, Statkraft wants to make significant reinvestments in the Nordic hydropower portfolio and has plans for a record-high activity level towards 2030.

In the recently updated strategy Statkraft set significantly higher growth ambitions across geographies and technologies. Specifically, accelerating the growth rate in renewable energy, pursuing an industrial role in offshore wind, aim to become a leading developer of green hydrogen in Norway and Sweden and raise the business development level across technologies in Norway. The aim is to be a major solar, onshore wind and battery storage developer with an annual delivery rate of 2.5–3 GW per year by 2025 and 4 GW per year by 2030. In total, Statkraft aims to develop 30 GW new renewable capacity within 2030, which will be partly kept and partly divested. That could increase Statkraft's annual power generation by up to 50 percent from today, to around 100 TWh per year by the end of the decade. The high Nordic power prices have had a positive effect on the investment capacity. The recently proposed regulatory changes in Norway with higher resource rent tax and a high-price contribution on power generation will have a negative effect on our project profitability and investment capacity. However, Statkraft still has a solid financial foundation for further growth. The investment programme has a large degree of flexibility, and the pace and total amount of investments will depend on market development and opportunities.

Statkraft has a substantial volume of long-term power contracts within the segments European flexible generation and International power. These contracts are supplemented with financial power contracts and other risk mitigating activities. This reduces the price risk for significant parts of Statkraft's generation and, in sum, have a stabilising effect on cash flow over time. Statkraft will continue to offer new contracts to maintain the position as a competitive supplier to the industry in Norway.

Statkraft's ambition is to maintain the position as the largest generator of renewable energy in Europe and to be a significant player in South America and India through investments in renewable energy. This will contribute to lowering carbon emissions and fight climate change.

Statkraft's commitment to safety, sustainability and responsible business practices continues to be a foundation for all activities.

Oslo, 10 November 2022

Segments

The segment reporting is based on underlying figures, which is in accordance with how the corporate management makes, follows up and evaluates its decisions. The tables on the next page show the reconciliation of the IFRS figures versus the underlying figures.

Following Statkraft's updated strategy and corresponding changes to business areas and corporate management, an assessment of the operating and reportable segments is ongoing. It is expected that Statkraft will report on the new reportable segments in the fourth quarter 2022. The new segments will be: Nordics, Europe, International, Markets, District heating and New technologies.

THIRD QUARTER 2022

The items below are excluded from the underlying figures:

1. **Gains/losses from market activities:** Unrealised value changes from embedded EUR derivatives related to long-term industry contracts. (NOK 329 million)
2. **Other operating income:** Gains from divestments of business activities that are not included in the DS/DBS business model.
3. **Impairments/reversal of impairments:** Related to intangible assets, property, plant and equipment. (NOK 288 million)
4. **Other operating expenses:** Losses from divestments of business activities that are not classified as DS/DBS.

YEAR TO DATE 2022

The items below are excluded from the underlying figures:

5. **Gains/losses from market activities:** Unrealised value changes from embedded EUR derivatives related to long-term industry contracts. (NOK 484 million)
6. **Other operating income:** Gains from divestments of business activities that are not included in the DS/DBS business model.
7. **Impairments/reversal of impairments:** Related to intangible assets, property, plant and equipment. (NOK 253 million)
8. **Other operating expenses:** Losses from divestments of business activities that are not classified as DS/DBS.

THE YEAR 2021

The items below are excluded from the underlying figures:

1. **Gains/losses from market activities:** Unrealised value changes from embedded EUR derivatives related to long-term industry contracts. (NOK 1285 million)
2. **Other operating income:** Gains from divestments of business activities that are not included in the DS/DBS business model. (NOK -822 million)
3. **Impairments/reversal of impairments:** Related to intangible assets, property, plant and equipment. (NOK -3403 million)
4. **Other operating expenses:** Losses from divestments of business activities that are not classified as DS/DBS. (NOK 5 million)

Selected notes to the accounts

1. FRAMEWORK AND MATERIAL ACCOUNTING POLICIES

The consolidated financial statements for the third quarter of 2022, ended 30 September 2022, have been prepared in accordance with International Financial Reporting Standards (IFRS) and consist of Statkraft AS and its subsidiaries and equity accounted investments. The interim financial statements have been prepared in accordance with IAS 34, Interim Financial Reporting. As the information provided in the interim financial statements is less comprehensive than that contained in the annual financial statements, these statements should therefore be read in conjunction with the consolidated annual report for 2021. The accounting policies applied are the same as those applied in the annual consolidated financial statements for 2021, except IAS 29 – Financial reporting in Hyperinflationary Economies that was applied in the second quarter as the Turkish economy was defined as hyperinflationary. For the period beginning 1 January 2022, Turkish entities' non-monetary assets, liabilities and equity measured at historical cost have been remeasured since acquisition date. See note 8 for further information.

The interim consolidated financial statements have not been audited.

2. PRESENTATION OF FINANCIAL STATEMENTS

The presentation in the interim report has been prepared in accordance with the requirements in IAS 34. The schedules comply with the requirements in IAS 1.

3. ACCOUNTING JUDGMENTS, ESTIMATES AND ASSUMPTIONS

In applying the Group's accounting principles to the preparation of the interim financial statements, the management has exercised its judgment and employed estimates and assumptions that affect the figures included in the statement of profit and loss and the statement of financial position. The most important assumptions regarding future events and other significant sources of uncertainty in relation to the estimates, and which may involve a significant risk of material changes to the amounts recognised in future financial periods, are discussed in the annual report for 2021. In preparing the consolidated financial statements for the current quarter, the Group's management has exercised its judgment in relation to the same areas where such judgment has had material significance in relation to the figures included in the Group's statement of profit and loss and statement of financial position, as discussed in the annual report for 2021.

Uncertain energy markets

Since the annual report for 2021 was published, there has been an extraordinary situation in the energy market. The shortage of gas supplies from Russia has increased the risks and uncertainty in the global energy markets. In third quarter the power prices have continued at even higher levels and are very volatile. This leads to higher uncertainty in estimates and a risk for adjustments of carrying amounts of non-financial assets and long-term energy contracts in subsequent periods.

The Group's liquidity risk as well as the counterparty risk is reviewed continuously in light of the situation.

Statkraft ensures on an ongoing basis that no operations are in breach with the relevant sanctions set out by the EU or other authorities. In addition, risks and uncertainties may arise from regulatory interventions.

Management will continue to monitor the situation going forward and adapt to market conditions.

4. CHANGES IN THE FINANCIAL STATEMENTS AND COMPARABLE FIGURES

Presentation of revenues related to DS/DBS business model in Europe Until the fourth quarter 2021, revenues from power generation from a completed wind or solar farm until divestment, as well as asset management, operation and maintenance revenues related to the DS/DBS business model in Europe were presented as Other operating income in the Statement of Comprehensive Income. From the fourth quarter 2021, these revenues are presented as Sales revenues in the sub-category Other. Comparable figures have been restated. In the financial statements for the third quarter and year to date, NOK 49 million and NOK 85 million respectively have been reclassified from Other operating income to Sales revenues in the sub-category Other.

Presentation of prepayments related to long-term power sales agreements In the third quarter 2021, prepayments related to long-term power sales agreements were presented as Other liabilities in the Statement of Financial Position. From the fourth quarter 2021, these are presented as Contract liabilities. Comparable figures for the third quarter have been restated by NOK 4142 million for Other non-current liabilities and NOK 316 million for Other current liabilities.

Presentation of lease liabilities Liabilities related to lease agreements have previously been presented as interest-bearing liabilities in the Statement of Financial Position. From the fourth quarter 2021, these are presented as Lease liabilities. Comparable figures for the third quarter have been restated by NOK 1820 million for non-current liabilities and NOK 256 million for current liabilities.

Presentation of bonds and bank debt Liabilities related to bonds and bank debt have previously been presented as interest-bearing liabilities in the Statement of Financial Position. From the fourth quarter 2021, these are presented separately as Bond and bank debt for non-current liabilities and Commercial papers, bond and bank debt for current liabilities. Comparable figures for the third quarter have been restated by NOK 27 240 million for non-current liabilities and NOK 3098 million for current liabilities.

Presentation of liabilities related to cash collateral Liabilities related to cash collateral have previously been presented as current interest-bearing liabilities in the Statement of Financial Position. From the fourth quarter 2021, these are presented as Other current liabilities. Comparable figures for the third quarter have been restated by NOK 5911 million.

Presentation of debt to Statkraft SF Debt to Statkraft SF has previously been presented as current interest-bearing liabilities in the Statement of Financial Position. From the fourth quarter 2021, these are presented as Other current liabilities. Comparable figures for the third quarter have been restated by NOK 200 million.

5. REVENUE SPECIFICATION PER SEGMENT

The Group's sales revenues and energy purchase are divided into four categories:

Generation includes sales revenues and energy purchase related to Statkraft's physical power generating assets. The category includes spot sales, long-term contracts, concessionary sales contracts and certain environmental certificates.

District heating includes sales revenues and energy purchase related to district heating activities in Norway and Sweden.

Customers includes sales revenues and energy purchase related to market access and end-user activities which are in accordance with IFRS 15 and is mainly related to activities in Germany, UK and Norway.

Other mainly consists of:

- Revenues related to DS/DBS business model in Europe.
- A subsea interconnector between Sweden and Germany.
- Rental of power plants in Norway.
- Grid activities in Norway and Peru.
- EV charging activities in Europe.

6. UNREALISED EFFECTS REPORTED IN THE STATEMENT OF PROFIT AND LOSS

The table below discloses the effects recognised in the statement of profit and loss from unrealised value changes from:

- **Gains/losses from market activities** includes inventories and financial instruments measured at fair value.
- **Net currency effects** includes currency gains and losses on financial instruments measured at amortised cost and fair value.
- **Interest and other financial items** includes financial instruments measured at fair value.

Total unrealised effects	-4 641			-4 328			3 786		

¹⁾ Includes effects from embedded EUR derivatives that is excluded from underlying EBIT as presented in the segment disclosure.

²⁾ Currency gains for the year 2021 from internal loans were NOK 27 million, of which a gain of NOK 406 million was realised.

- **European flexible generation** Negative unrealised effects from financial hedging of generation revenues driven by increased forward power prices through the third quarter. In addition, there were negative unrealised effects related to embedded derivatives linked to commercial long-term contracts in the segment European flexible generation driven by a strengthening of the forward NOK against EUR. These negative effects were partly offset by positive unrealised effects from embedded derivatives indexed to industry indices.
- **Market operations** The positive unrealised effects were mainly related to trading and origination. There were also positive unrealised effects from dynamic asset management portfolios.
- **International power** The negative unrealised effects were related to financial hedging of generation activities in Albania driven by increased forward prices through the third quarter.
- **European wind and solar** The negative unrealised effects were mainly related to financial hedging of generation revenues for wind power assets in Germany and France driven by increased forward prices on the hedges through the third quarter.
- **Group items and other** The negative unrealised effects were related to interest and exchange rate derivatives towards the segment Market operations.

¹⁾ Includes NOK 1326 million in inflation adjustment of Turkish entities due to hyperinflation as of 30 September 2022. Comparable figures have not been restated.

Accounting policies, judgment and assumptions for impairments are described in note 15 in the annual report 2021.

Hyperinflation in Turkey The Turkish economy has been defined as hyperinflationary since the second quarter 2022, and still is in the third quarter. For the period beginning 1 January 2022, Turkish entities' non-monetary assets and liabilities measured at historical cost have been remeasured since acquisition date. The application of IAS 29 results in an adjustment for the loss of purchasing power of the Turkish Lira. The consumer price index published by the Turkish Statistical Institute has been used when applying IAS 29. The CPI index was 686.95 in December 2021 and 1046.89 in September 2022. The main effect from the remeasurement is an increase of Property, Plant and Equipment of NOK 1.3 billion, with a corresponding effect under Other Comprehensive Income.

Impairments/reversal of impairments

Hydropower in Chile In the third quarter an impairment of NOK 277 million related to a hydropower project was recognised in the statement of profit and loss under the segment International power. The impairment is explained by delay in expected commercial operation date for the project, resulting in lower revenues and increased estimated costs.

In the first and second quarter the same hydropower project had impairments of NOK 1497 million, which was explained by increased estimated costs as well as reduced revenues driven by expected lower power prices in the long-term horizon.

The estimated values are sensitive to changes in future power prices and cost of capital.

9. INVENTORIES

Statkraft's inventories consist of environmental certificates and wind- and solar projects that Statkraft intends to develop and divest to third parties either before, at the time of or shortly after construction (DS/DBS). In addition, Statkraft also has some inventories which are directly related to the tangible assets, whereof spare parts are the most significant group.

Statkraft currently has 10 ongoing construction projects within the business model, as well as one project where construction is completed. Put/call option agreements (PCOA) for future sale have been signed for four construction projects and one development project. The carrying value of these projects are NOK 2.5 billion at quarter end. These agreements will be closed when the projects reach the agreed conditions.

Statkraft also divested one wind farm in the UK in the second quarter. In addition, one solar park in Spain and three in the Netherlands were divested in the first quarter. See also note 14.

INTEREST-BEARING DEBT REPAYMENT PLAN ¹⁾

¹⁾ Lease liabilities and debt related to cash collateral are not included.

Very volatile commodity markets with record-high prices have resulted in significantly higher margin requirements. To manage the market volatility, Statkraft has taken precautionary measures to secure liquidity and financial flexibility through raising short-term loans.

In the third quarter, Statkraft issued a green bond of EUR 500 million. The bond matures in September 2029 and pays a fixed coupon of 2.875 %. In addition, a certificate loan of NOK 5000 million maturing in August 2022 has been extended to February 2023.

Significant increase in total assets

Statkraft's assets totalled NOK 475 billion at the end of the third quarter, compared to NOK 310 billion at the end of 2021. The significant increase in total assets are explained by a surge in the value of the Groups derivatives of NOK 101 billion following the significant increase of the prices of both power, energy and energy related commodities. Furthermore, the Group's receivables increased by NOK 31 billion mainly as a result of increased margin requirements. Very volatile energy markets with record-high prices have resulted in significantly higher margin requirements. To manage the market volatility, Statkraft has taken precautionary measures to secure liquidity through increased level of cash and cash equivalents. Cash and cash equivalents have increased by NOK 19 billion compared with the end of 2021.

12. PROPOSED CHANGES IN REGULATIONS

Norway

On 28 September the Norwegian Government proposed significant changes in regulations affecting both hydropower producers and wind power producers.

The proposed high-price contribution and the proposed increase in resource rent tax on hydropower production will, if enacted, have material effects on Statkraft's financial statements from 2022 and forwards.

High-price contribution on hydropower production

The Government is proposing to introduce a high-price contribution, with the rate set at 23 per cent of the electricity price in excess of NOK 0.70 per kWh. The high-price contribution will be calculated hourly for each price area and the basis is limited to revenues from power generation and will not be deductible for corporate tax, resource rent tax or property tax.

The new regulation is proposed to apply from 28 September 2022 to hydropower stations with generators with a total rated output of 10 000 kVA or more and from 1 January 2023 to other hydropower stations.

Given an enactment of a high-price contribution on hydropower production Statkraft expects a significant additional regulatory expense in years with high prices. Preliminary and uncertain estimates indicate an additional regulatory expense exceeding NOK 1.7 billion alone for the fourth quarter of 2022. Statkraft also expects significant negative effects on share of profit from equity accounted investments.

Higher resource rent tax on hydropower production

The Government is proposing to increase the effective resource rent tax rate on hydropower from 37 per cent effective tax rate to 45 per cent effective tax rate, with effect from 1 January 2022.

Given an enactment of higher resource rent tax on hydropower production Statkraft expects a significant increase in the resource rent tax expense with effect for the financial year 2022 and forwards.

Preliminary and uncertain estimates indicate an additional payable resource rent tax exceeding NOK 2.5 billion for the financial year 2022. Furthermore, deferred tax positions will be remeasured to the new higher tax rate. Statkraft also expects significant negative effects on share of profit from equity accounted investments.

In addition to this, there are several other proposals affecting Statkraft with effects from 2023 and forwards.

Statkraft is still in the process of evaluating the total impacts of the proposed changes.

Other countries

There are ongoing discussions in several other countries regarding imposing windfall taxes on energy companies' income. Such windfall taxes might, if enacted, have negative effects on Statkraft's financial statements.

13. BALTIC CABLE – REGULATIONS OF REVENUES

Baltic Cable AB (BC) is a subsidiary of Statkraft reported under the segment European flexible generation. The company is the owner of a subsea interconnector between Sweden and Germany. BC is a European transmission system operator (TSO) and is certified in accordance with the German energy legislation.

In the second quarter, the Swedish regulator Energimarknadsinspektionen (Ei) and the German regulator Bundesnetzagentur (BNetzA) issued decisions regarding the regulation of BC's revenues. Ei decided, for the period 1 July 2013 to December 2021 and with respect to 50 per cent of BC's revenues, that revenues above a defined level of operation costs, depreciation and return on capital must be dedicated to the purposes set out in EU Regulation 714/2009 (i.e., for network investments to maintain or increase capacity). This decision has been appealed to the Swedish administrative court, i.a because BC disagrees with certain elements of the calculations.

BnetzA orders BC, with respect to 50 per cent of its revenues, to transfer cash from revenues exceeding a defined level of operation costs, depreciation and return on capital, to a neighboring German TSO for 2022. BC is of the clear view that there is no legal basis for such an order and will appeal this to the Higher Regional Court in Düsseldorf. BC will also request that the decision is suspended pending the appeal. Since such suspensive effect is not certain, a provision has been recognised in the YTD accounts. It is expected that BnetzA also will regulate 50 per cent of the revenues for the period 1 July 2013 to 31 December 2021 by requiring revenues above the allowed level dedicated to the purposes set out in EU Regulation.

As of 30 September 2022, cash and cash equivalents in BC amounted to NOK 3.2 billion is presented under the line item Cash and cash equivalents, of which NOK 460 million is regulated for futures investments. NOK 693 million was recognised in the third quarter as a provision under short term liabilities and as a reduction of revenues. This comes in addition to the provision of NOK 504 million which was recognised in the second quarter.

14. PENSION SCHEME CHANGES IN NORWAY

On 1 April, a regulatory change in the public pension benefit schemes in Norway was enforced. The change was related to the method for annual regulation of pension payments. Prior to the regulatory change, the annual regulation of pension payments was based on the national insurance scheme's basic amount (G) minus a fixed factor of 0.75 per cent. Going forward, the adjustment will be based on the average of salary adjustment and inflation. The regulatory change is assessed to be a plan amendment which has increased Statkraft's consolidated pension liabilities and pension costs with estimated NOK 322 million.

15. DISPUTES, CONTINGENCIES AND UNCERTAIN TAX POSITIONS

There are no material changes to the facts and circumstances of the significant legal proceedings and uncertain tax positions disclosed in the annual report for 2021.

16. MERGERS, ACQUISITIONS AND DIVESTMENTS

From the Develop-Sell / Develop-Build-Sell (DS/DBS) business model:

On 28 January, Statkraft divested three newly constructed solar parks with a total capacity of 40 MWp in the Netherlands to Encavis AG for a total consideration of NOK 435 million, including cash received for debt paid as part of the Share Purchase Agreements. This led to a total gain of NOK 71 million, recognised as Other operating income.

Statkraft also entered into agreements to provide asset management and operation and maintenance services on the solar parks subsequent to the divestments.

On January 31, Statkraft divested a 58 MWp solar park under construction in Cadiz in Spain to The Renewables Infrastructure Group (TRIG) for a total consideration of NOK 172 million. This led to Statkraft recognising gains of NOK 112 million as Other sales revenues and NOK 27 million as Other operating income.

Following agreements signed in 2021, Statkraft will after the divestment also perform Engineering, Procurement and Construction (EPC) activities to construct the solar park, as well as provide asset management and operation and maintenance activities going forward.

On June 24, Statkraft divested the recently completed 38 MW wind farm Twentyshilling in the UK to Greencoat for a total consideration of NOK 623 million, including payment of a shareholder loan. This led to Statkraft recognising a gain of NOK 49 million as Other operating income.

Statkraft also entered into an agreement to provide asset management services on the wind farm subsequent to the divestment.

17. SUBSEQUENT EVENTS

There are no significant subsequent events.

Alternative Performance Measures

As defined in ESMA's guideline on alternative performance measures (APM), an APM is understood as a financial measure of historical or future financial performance, financial position, or cash flows, other than a financial measure defined or specified in the applicable financial reporting framework.

Statkraft uses the following APMs:

EBITDA underlying is defined as operating profit/loss (EBIT) underlying before depreciations and amortisations. The APM is used to measure performance from operational activities. EBITDA underlying should not be considered as an alternative to operating profit and profit before tax as an indicator of the company's operations in accordance with generally accepted accounting principles. Nor is EBITDA underlying an alternative to cash flow from operating activities in accordance with generally accepted accounting principles.

Operating profit/loss (EBIT) underlying is an APM used to measure performance from operational activities.

Items excluded from operating profit/loss (EBIT) underlying:

Statkraft adjusts for the following three items when reporting operating profit (EBIT) underlying:

1. **Unrealised value changes from embedded EUR derivatives**, since they do not reflect how the segment is following up on the results. The EUR exposure in the power sales agreements with the power intensive industry are hedged by entering into currency derivatives or EUR bonds. Hence, the unrealised value changes from the energy (EUR) derivatives are partly offset in Net financial items in the Profit and loss statement.
2. **Gains/losses from divestments of business activities that are not classified as DS/DBS**, since the gains or losses do not give an indication of future performance or periodic performance from operating activities. Such gains or losses are related to the cumulative value creation from the time the asset is acquired until it is sold.
3. **Impairments/reversal of impairments**, since they affect the economics of an asset for the useful life of that asset; not only the period in which it is impaired, or the impairment is reversed.

The above items are also excluded from **Gross operating revenues and other income underlying** and **Net operating revenues and other income underlying**. See also section Segment.

ROACE is defined as operating profit/loss (EBIT) underlying divided by capital employed. ROACE is calculated on a rolling 12-month average and is used to measure return from the operational activities as well as benchmarking performance.

ROAE is defined as share of profit/loss in equity accounted investments, divided by the book value of the Group's equity accounted investments. ROAE is calculated on a rolling 12-month average. The financial metric is used to measure return from the Group's equity accounted investments as well as benchmarking performance.

Capital employed is the capital allocated to perform operational activities. Property, plant and equipment, intangible assets and solar- and wind projects presented under inventories in the statement of financial position (DS/DBS) are defined as Statkraft's capital employed.

Net interest-bearing liabilities is used to measure indebtedness.

Net interest-bearing liabilities - equity ratio is calculated as net interest-bearing liabilities relative to the sum of net interest-bearing liabilities and equity.

Operating profit/loss (EBIT) margin underlying (%) is calculated as operating profit/loss (EBIT) underlying relative to gross operating revenues and other income underlying.
